Unity Plugin – CAS

CAS · https://tenjin.com/zh/docs/unity-plugin-cas/

The Tenjin SDK can listen to CAS impression level revenue data and send revenue events to Tenjin. This integration will send revenue related for each ad impression served from CAS. Here are the steps to integrate:

1. Add the latest version of CAS SDK to your podfile: https://github.com/cleveradssolutions/CAS-Unity/wiki
2. Integrate CAS SDK in your app. You can use the method `CASImpressionFromJSON(string json)`.

Here is an example impression level revenue data entry from CAS:

Parameter	Required?	Example
network_name	No	Network
ad_unit_id	No	id-69082
creative_id	No	id-41203
revenue	Yes	2
revenue_precision	No	floor
format	No	interstitial
